## Introduction

As IMBeR (Integrated Marine Biosphere Research) approaches the conclusion of its decade-long journey from 2016 to 2025, we invite you to join us at the IMBeR Synthesis and Future Planning Conference (Future Oceans 3, FO3). This pivotal event will explore three core themes: Looking Inward, Looking Outward, and Looking Forward.

#### **Core Themes:**

- (2016-2025).
- programs, organizations, and initiatives.

Future Oceans 3 will bring together IMBeR's diverse science teams-including Regional Programs, Working Groups, Endorsed Projects, Study Groups, national committees, and the Interdisciplinary Marine Early Career Network (IMECaN)-as well as representatives from international organizations, policymakers, and early career researchers. Participants are encouraged to present their achievements, propose new projects, and organize specialized sessions tailored to their needs.

The outcome of this meeting will help shape the future of marine biosphere research, focusing on addressing the cumulative impacts of multiple stressors on our oceans and developing scientific solutions for mitigation.

Shanghai, China & Online

• Theme 1: Looking Inward: Reflecting on IMBeR's scientific achievements over the past decade

• Theme 2: Looking Outward: Reviewing IMBeR's interactions with relevant scientific projects,

• Theme 3: Looking Forward: Envisioning the future of marine biosphere research post-IMBeR

## Logistics

Venue: Courtyard by Marriott® Shanghai Minhang

#### Address: Building 3, 588 Zixing Road, Minhang District, Shanghai, China, 200241

Courtyard by Marriott<sup>®</sup> Shanghai Minhang is 1.5 km from the nearest metro station (Line 15 Zizhu Hitech Park Station).

#### **First Floor**

#### **Second Floor**

#### **On-site Registration**

## **Transportation Information**

When planning your trip to attend the FO3 conference, you have two main airport options: **Shanghai Pudong International Airport (PVG) and Shanghai Hongqiao International Airport (SHA).** 

#### ① SHA to Venue

Shanghai Hongqiao International Airport (SHA) is the closest option, 32km from the Venue. This proximity offers the convenience of a 40-minute drive.

#### Taxi:

Taxis are readily available outside the airport terminal. A ride to the Courtyard by Marriott will take around 40 minutes, with a daytime fare of around 75-90 CNY (10-12 USD).

#### Metro:

The Metro System in Shanghai offers an alternative for transportation. You can board Line 2 of the Metro and ride until you reach the Loushanguan Road Station. From there, transfer to Line 15 and travel to Zizhu High-tech Park Station. After that, take a short taxi ride to reach the Courtyard by Marriott. The cost of a single Metro ride is around 6 CNY (0.8 USD).

#### 2 PVG to Venue

Shanghai Pudong International Airport (PVG) provides a larger selection of international flights and may offer more flexible scheduling options. While travel from PVG to Courtyard by Marriott involves a longer journey of approximately 45 km.

#### Taxi:

A ride to the Courtyard by Marriott will take around 1 hour and cost approximately 115-140 CNY (16-20 USD).

#### Suburban Railway Airport Link Line and Metro:

The Shanghai Suburban Railway Airport Link Line began operations in December 2024, making airport commuting more convenient.

You can take the Shanghai Suburban Railway Airport Link Line and travel to Jinghong Road Station. The fare for the Suburban Airport Link Line is structured as follows:

Shanghai Hongqiao Airport (SHA) → Jinghong Road: 9 CNY (1.3 USD)

Shanghai Pudong Airport (PVG) → Jinghong Road: 17 CNY (2.5 USD)

You can then transfer to the Metro Line 15 at Jinghong Road Station, with a 4 CNY (0.6 USD) fare to Zizhu Hi-Tech Park Station. Once you exit the station, take a short taxi ride to the Courtyard by Marriott.

## **Additional Logistics**

Sustainability tip: Please bring your own reusable water bottle. Drinking water will be available at the venue.

Shuttle Bus Arrangement: If you are staying in the hotels nearby, please comlete this form by 10 may, so we can arrange transportation to and from the venue:

https://imber.ceotr.ca/machform/view.php?id=205388

Contact for shuttle questions: Dr. Liang (Email: Liangweiwenhui@126.com)

## **Virtual Attendance**

Download the official app now:

We encourage you to use the conference website and mobile app for all current information and to navigate the conference.

#### The link to download the app is

https://whova.com/portal/x4P25yJ1dMko0X@siB9hl@g1zRIYKdbLhkdLh-2BKRM=

FOLLOW US ON TWITTER! @imber\_ipo @ FutureOceans 3

## **Oral Presentation Guidelines**

In-person speakers: Please copy your presentation slides to the venue computer before your session begins.

Online speakers: If you'd like the on-site team to have a backup of your presentation, please send your slides to your session moderator in advance. After joining online, please confirm your presence with the moderator.

## **Poster Presentation Guidlines**

The poster session will be held both on-site and on Whova. Please refer to the guidelines here: https://imber.info/wp-content/uploads/2025/04/Poster-Presentation-Guidelines-27-April.pdf

All poster presenters must upload their posters to Whova by 12 May (see separate email for the upload invitation).

In-person participants must also bring a printed copy of their poster to display onsite.

Understanding multi-stressors of marine environments and achievements and challenges from ecosystem resilience and environmental management 13 May, 08:40 - 09:40, 3rd floor Ballroom Dongyan Liu Jacob Carstensen

This session addresses the effects of environmental stressors on ecosystem implications and biogeochemical cycles in marine ecosystems, both in isolation and in concert. Potential stressors include, but are not limited to, nutrient enrichment, climate stressors (such as acidification, warming, hypoxia, extreme events, and pollutants). Presentations to understanding ecosystem implications and resilience to changing environmental conditions are also welcome. Presentations could also consider management responses or novel ocean solutions to changes in environmental conditions and climate that take into account the complex interactions of biogeochemical processes in marine ecosystems and their resistance to such changes.

Session 2	Achievements from IMBeR Grand
	from scenarios, predictions and pr
	tions
	13 May, 10:00 - 11:00, 3rd floor Ba
Convenor	Rowan Trebilco

This session aims to synthesize and celebrate IMBeR's key achievements under Grand Challenge 2 and discuss the strategic opportunities for building on these achievements and taking advantage of IMBeR's unique strengths in IMBeR 3.0.

Over the past decade, IMBeR's Grand Challenge 2, "Improving scenarios, predictions, and projections of future ocean-human systems at multiple scales," has focused on integrating our understanding of the drivers and consequences of global change on marine ecosystems and human societies into models to project and predict future states. Activity under this challenge has led to significant advancements in developing integrated data systems and approaches for predictions and projections, utilizing predictive models (including best-practice methods for downscaling and integrating social processes), and creating scenarios that bridge physical, biological, and social sciences. Now, there is a rapidly increasing global demand for information, tools, and approaches to support equitable actions, solutions, and interventions for climate adaptation, mitigation, and nature repair. This presents a unique strategic opportunity for the IMBeR community to leverage its established leadership and expertise in model and scenario development while strengthening the integration between climate and biodiversity science and incorporating diverse knowledge systems, including Indigenous science. In the next phase of IMBeR's work, it could lead the development of best-practice approaches for evaluating such actions, solutions, and interventions to support the sustainability of marine social-ecological systems and ensure equitable outcomes. This work will be crucial in guiding evidence-based decision-making for ocean sustainability in the coming decades, and would build upon IMBeR's established leadership position in this space.

Blue Transformations: Governance for the ocean-climate-biodiversity nexus 13 May, 11:00 - 12:00, 3rd floor Ballroom **Derek Armitage** 

This session explores governance transformations required to address the ocean-climate-biodiversity nexus and the implications for the blue economy and society. Profound changes are needed in the structures, processes, rules, and norms that catalyze radical and sustainable reconfigurations of social, political, economic and ecological aspects of oceans. Potential entry points to explore blue governance transformations at the ocean-climate-biodiversity nexus include fisheries and food systems (e.g., climate resilient fisheries), managing and mitigating nutrient flows at the land-ocean interface, the expansion of MCDR initiatives and their implications for vulnerable coastal communities (e.g., tenure, resource access), and net positive biodiversity and conservation initiatives, including the emergence of biodiversity credit schemes. A cross-cutting challenge is how to better align advances in empirical understandings of the ocean-climate-biodiversity nexus with governance and policy innovations that consider issues of equity and justice. Novel methods that foster knowledge co-production and transdisciplinary perspectives (e.g., future scenarios, participatory modelling) are recognized as particularly important in supporting governance transformations. The session provides a foundation to explore the governance transformations needed to address a range of Ocean Decade challenges, such as Challenge 2 (protect and restore ecosystems and biodiversity), Challenge 3 (sustainably feed the global population), and Challenge 5 (unlocking ocean-based solutions to climate change).

## **Parallel Theme Sessions**

Session 4

Convenor

Stakeholder engagement in complex ocean multilevel governance settings 14 May, 13:30 - 15:00, 2nd floor Multi Function Room 1 Marta Ballesteros

Engagement with stakeholders transforms scientific and policy processes. The journey of participation in the marine domain has been long and challenging, evolving from a contested issue to a mainstream approach. Today, participation is regarded as critical for enhancing the scientific foundation of decision-making and ensuring the legitimacy of policy-relevant science. However, organizations worldwide face similar challenges in leveraging participation while managing associated risks. Ocean multilevel governance encompasses the institutions and processes through which multiple policy actors operate. Major international organizations like the Intergovernmental Science-Policy Platform on Biodiversity and Ecosystem Services (IPBES), the Intergovernmental Panel on Climate Change (IPCC), and the International Council for the Exploration of the Sea (ICES), have developed various approaches to stakeholder interaction. Additionally, research and policy frameworks as the United Nations Sustainable Development Goals (SDGs) demand partenership and cooperation. This session aims to stimulate debate within the international community on three areas:

- Conceptual Challenges: Do we need to rethink the stakeholder language? "stakeholder," "rightsholder", "the one to be holders".

- Analytical Challenges: Do we have frameworks to understand and assess the performance of stakeholder engagement?

- Evidence from the field : What features of the international context influence engagement performance and outcomes? How researchers experience engagement?, etc.

## Program

Session 5

Convenor

14 May, 10:30 - 12:00, 2nd floor Multi Function Room 2 Enrong Yan

With less than 5% of the global terrestrial area, marine islands hold 20% of the world's biodiversity. Biodiversity on marine islands is characterized by unique biogeographic, phylogenetic and functional characteristics, and plays a crucial role for sustaining ecosystem multifunctionality globally. However, marine islands are also experiencing a disproportionate loss of endemic species and a disproportionate gain of invasive species, due to increasing negative human impacts that make islands transitioned from primary through secondary to tertiary economies. In addition to habitat transformation and non-native species introduction, human-induced climate change and sea-level rise are emerging as new threats to biodiversity. Currently, islands are undergoing an unprecedented biodiversity remodeling, with some species going extinct, others changing in abundance, and non-native species becoming a part of many ecosystems. Undoubtedly, such species reassembly processes inevitably lead to unpredictable consequences on ecosystem multifunctionality. In this context, this session aims to stimulate a collaborative discussion to: 1) better understand how island biodiversity may respond to anthropogenic threats such as habitat loss, biological invasion, sea-level rise and climate change, and how the compositional and functional changes of biodiversity influence island ecosystem multifunctionality; and 2) develop new strategies for the protection and restoration of island biodiversity, including maintaining biological and cultural heritage through regenerative practices, mainstreaming biodiversity in cultural and production landscapes, and engaging with the reality of novel ecosystems.

Session 6

Convenors

processes and management collaboration 14 May, 13:30 - 17:45, 2nd floor Multi Function Room 2 Jinzhou Du Wen-Chen Chou

In the maintenance of Earth's ecological balance and mitigation of climate change, blue carbon ecosystems (BCECO) play a crucial role. As one of the major carbon sinks on the Earth's surface, BCECOs absorb a significant amount of carbon dioxide and store it in marine organisms and seabed sediments, effectively slowing the trend of global warming. Although about 83% of the global carbon cycle occurs in the oceans, BCECOs such as mangroves, salt marshes, and seagrass beds, which cover less than 0.5% of the seabed area, account for over 50% of the carbon storage in marine sediments, making them one of the highest density carbon sinks on Earth. At the same time, the carbon sequestration capacity of BCECOs is much greater than that of terrestrial carbon pools per unit area. In addition, BCECOs, as hotspots of interaction between land and ocean, have significant scientific, social, economic, and ecological benefits. However, once BCECOs are damaged, the long-term stored carbon will be released into the atmosphere and oceans, becoming a source of greenhouse gases. Due to the complexity and fragility of BCECOs, there are still many unresolved issues regarding their carbon sink contributions. The main problems lie in the uncertainty of blue carbon storage, the lack of clarity in the lateral carbon exchange processes between ecosystems and adjacent waters, and the inconsistency in estimating methods for underground biomass and sedimentary blue carbon. The observation technologies and objects are not only different from those of terrestrial and marine ecosystems but also face multiple pressures from both land and sea. Therefore, there is an urgent need to continuously carry out research on carbon sink functions and

Shanghai, China & Online

## Island biodiversity and ecosystem multifunctionality in the Anthropocene

Coastal blue carbon ecosystem: carbon resources evaluation, sources-sinks

## **FUTURE OCEANS**<sub>3</sub>

## Program

mechanisms, carbon sink assessment, ways and technologies to enhance carbon sequestration, and intelligent monitoring of carbon sinks. This conference will focus on interdisciplinary achievements and technical exchanges related to carbon resources, carbon processes, and carbon management in BCECOs, providing scientific and technological support to improve the accuracy of BCECO carbon sink value assessments and reduce uncertainties.

Convenor

Synthesizing ecosystem-social interactions in coastal seas 14 May, 10:30 - 12:00, 2nd floor Multi Function Room 3 Su Mei Liu

Continental marginal systems are supporting human well-being from important and valuable goods to services, but anthropogenic activity and climate change have substantially altered the oceans and are impacting their ability to sustain ecological and human communities. Integrating environmental, ecological and economic knowledge of continental margin systems, and how these systems may change under different perturbation scenarios, is imperative to understand the interplays between human uses of the oceans, present management strategies of marginal systems, and optimize the services they provide. Lessons learned from multidisciplinary syntheses and inter-regional comparative studies of coastal socio-ecological systems will help rationalize and optimize marginal seas management approaches. This session is aimed at improving our understanding of long-term marginal social-ecological systems, guiding sustainable development of resources and advising governance regimes to facilitate sustainable governance, facilitating equitable sharing of margin resources, and evaluating alternative research approaches and partnerships that address major margin challenges.

#### Session 9 Optical remote sensing in the Northwest Pacific and the Central Indo-Pacific Oceans 14 May, 13:30 - 15:00, 2nd floor Multi Function Room 3 Convenor Young-Je Park

Optical remote sensing has become an indispensable tool for studying oceanographic and coastal processes, offering valuable insights into coastal water quality, primary productivity, marine biodiversity, and climate-driven changes. By leveraging satellite-derived data, researchers can monitor algal blooms, sediment dynamics, coral reef health, fisheries, and coastal pollution, supporting sustainable marine resource management and ecosystem conservation.

The Indo-Pacific and Northwest Pacific Oceans encompass some of the most biologically productive, diverse, and climatically significant regions in the world. Additionally, the adverse pressures on the marine environment are increasing due to rapid industrialization, making the role of optical remote sensing crucial in addressing these challenges.

In addition to traditional ocean color satellite data, a new generation of satellite data—including geostationary satellite data, high-resolution satellite data, and hyperspectral satellite data has become increasingly available. Furthermore, with advancements in artificial intelligence (AI) technologies, optical remote sensing is becoming an even more powerful and effective tool for monitoring the marine environment.

This session invites contributions on recent research findings in the field of optical remote sensing, including the following topics.

## Program

- Satellite-based monitoring of coastal water quality
- Detection of harmful algal blooms and phytoplankton species identification
- Fisheries resource management using ocean remote sensing
- Climate change monitoring in the marine biosphere
- Coral reef and marine habitat monitoring
- Optical remote sensing applications for marine environmental issues

Session 11

Convenor

#### International research and educational collaboration for sustainable tropical and subtropical marine ecosystems 14 May, 10:30 - 12:00, 2nd floor Multi Function Room 1 Hiroaki Saito

Tropical and subtropical marine ecosystems (TASMEC) are hotspots of biodiversity and provide a variety of ecosystem services, including food supply, water purification, tourism and cultural services. Coastal regions of TASMEC are the most populated area in the world and are experiencing rapid growth in population and economic activity. The marine ecosystem services in TASMEC are deteriorating because to anthropogenic perturbations including global warming and increased human activity. These include coral bleaching, eutrophication, chemical pollution, the collapse of fishery resources, etc. For developing countermeasures against the degradation and sustainable use of marine ecosystem services, it is necessary to take science-based decision-making process by all the stakeholders of the marine ecosystems. Despite the importance, the structure and dynamics of TASMEC and the biogeochemical cycles are not fully understood due to the limitation of ocean professionals and scientific facilities. Expert training, education and transfer of marine technology are essential activities to increase scientific knowledge at TASMEC and to realize the sustainable use of marine ecosystem services for human wellbeing. This session will discuss regional and international collaboration activities for solving scientific challenges, education and technology transfer in TAS-MEC.

Session 12

Convenors

SIBER and the Second International Indian Ocean Expedition 14 May, 15:20 - 17:45, 2nd floor Multi Function Room 3 **Raleigh Hood** Greg Cowie

The session will include presentations by SIBER scientific steering committee members who, between them, will summarise major highlights of the first 10 years of IIOE-2 and some of the SI-BER-led research projects, cruises and publications. Plans for the next five years, now part of an updated IIOE-2 science plan and implementation strategy (also SIBER-led), will also be presented.

## Program

## **IMBeR-Partner Session**

Session 7

Convenors

IMBeR Strategic Partnership: Recognizing Interfaces and Building Synergies with **Relevant Projects and UN Ocean Decade Programmes** 14 May, 08:30 - 10:10, 3rd floor Ballroom GiHoon Hong Fang Zuo

Marine scientific research strives to address complex and interconnected challenges, international collaborations across projects, programmes, organizations, and initiatives are essential to developing Earth System views. This session will explore the boundaries, connections, and synergies between IMBeR and other relevant scientific efforts within Global Research Projects of SCOR and Global Research Networks of Future Earth, international initiatives of the UN Ocean Decade family, and other potential partners.

Actionable recommendations are encouraged to reflect on how IMBeR's interdisciplinary and transdisciplinary marine research has been effectively integrated with the specialized expertise of partner initiatives to advance our understanding of ocean-human sustainability, ecosystem resilience, and science-policy engagement.

A set of indicators will be identified to examine the relationship between IMBeR and its partners for 2016-2025, to identify remaining frontiers, and to pave the way for developing a new science plan and implementation strategy on joint scientific research, capacity building, and science-policy approaches in the coming five or ten years.

This session is intended for researchers, program managers, policymakers, and entrepreneurs engaged in marine science and sustainability initiatives.

## **IMBeR Doctoral Forum**

#### 15 May, 08:30-10:00, 3rd floor Ballroom

Ning Zhao Convenors Kai Deng

The IMBeR Future Oceans 3 (FO3) meeting proudly presents the IMBeR Doctoral Forum, a platform for recent and soon-to-be PhD graduates in marine sciences to showcase their research and engage with leading scientists, policymakers, and peers. Aligned with FO3's mission of reflecting on past achievements, strengthening interdisciplinary partnerships, and shaping ocean sustainability, this forum fosters global collaboration, with a strong focus on early-career researchers (ECRs) from lowto medium-income countries. Participants will present their thesis work through oral presentations, speed talks and posters, while also contributing as session rapporteurs, gaining hands-on mentorship from senior researchers. To support inclusivity, SCOR Travel Support grants will subsidize travel and registration costs for 6-8 eligible applicants. Inspired by successful initiatives like DISCO (Dissertations Symposium in Chemical Oceanography), this forum builds capacity, amplifies early-career voices, and integrates diverse perspectives into global ocean science. Join us in Shanghai or online to share your research, connect with international partners, and contribute to shaping the future of marine biosphere research and marine sustainability. Apply now to be part of this transformative scientific network!

## Program

## **IMECaN Event**

Reflecting on IMECaN's Journey: Achievements, Insights, and Future 14 May, 15:20 - 17:45, 2nd floor Business Center

Convenor Shenghui Li

Moderator

Gabriella Akpah Yeboah

This hybrid session will explore the Interdisciplinary Marine Early Career Network's (IMECaN) evolution and impact over its first eight years, bringing together current and past members from diverse career stages and geographical locations. Participants will reflect on IMECaN's achievements since its 2016 establishment, examining its role in fostering collaborations, providing training opportunities, and promoting leadership development for early career researchers, particularly from developing countries. IMECaN now has 1,243 members from 103 countries, excluding Antarctica, with diverse participation across all continents. At least 25% of members are students at various levels, while the remaining members range from postdoctoral researchers to professors. Although the primary research themes include biodiversity, systematics, marine ecology, fisheries, and climate change, only 12% of the members focus on these topics, highlighting the diversity of the broad range of research interests within the network. The session will analyze the network's growth, evaluate its success in supporting interdisciplinary marine research, and discuss future directions as IMBeR enters a new phase. By reflecting on our past and envisioning our future, this session aims to strengthen IMECaN's role in shaping the next generation of marine researchers and contributing to sustainable ocean governance. Following the session, an in-person meeting will synthesize the gathered information for a peer-reviewed article, with authorship opportunities for all contributors.

## Schedule

## Day 1 - Tuesday, 13 May 2025

## Grand Challenges: Keynote Sessions

3rd floor Ballroom

08:20 - 08:40	Opening Session				
	derstanding multi-stressors of marine environments and achievements om ecosystem resilience and environmental management	<b>Convenors:</b> Dongyan Liu Jacob Carstensen			
08:40 - 08:43	Grand Challenge I Introduction Jacob Carstensen, Aarhus University				
08:43 - 09:02	Pathways of oligotrophication – hysteresis, shifting baselines, and legacy effect Jacob Carstensen, Aarhus University	ts			
09:02 - 09:21	Eastern boundary upwelling ecosystems under a changing climate Marisol García-Reyes, Farallon Institute				
09:21 - 09:40	The effect of nutrient limitation on temperature sensitivities of phytoplankton growth Hongbin Liu, The Hong Kong University of Science and Technology				
09:40 - 10:00	Break				
	nievements from IMBeR Grand Challenge 2 and opportunities for IMBeR os, predictions and projections to actions, solutions and interventions	<b>Convenor:</b> Rowan Trebilco

17:05 - 17:20	Discussion - Endorsed Projects and Study Groups		
Poster Sessio	n		
18:00 - 20:00	Poster Session (3rd floor, Foyer outside Ballroom)		

Each presentation is limited to 15 minutes. All Q&A will take place during the discussion session.

## Schedule

## Day 2 - Wednesday, 14 May 2025 IMBeR-Partner Session

3rd floor Ballroom

SESSION 7: IMBER STRATEGIC PARTNERSHIP: RECOGNIZING INTERFACES AND BUILDING SYNERGIES WITH RELEVANT PROJECTS AND UN OCEAN DECADE PROGRAMMES

 Wed. 14 May
 (UTC+8) 8:30-10:10

 Convenors
 GiHoon Hong Strategy Director, IMBeR IPO

 Fang Zuo Executive Officer, IMBeR IPO

 08:30 - 08:35
 Opening and Welcome

Kauna ta Da			
Keynote Presen			
08:35 - 09:00	Action for a sustainable ocean Marie-Alexandrine Sicre Vice-Chair, Intergovernmental Oceanographic Commission, International Science Council Fellow		
09:00 - 10:00	Panel discussion: Partnerships in practice		
	Marie-Alexandrine Sicre Vice-Chair, Intergovernmental Oceanographic Commission, International Science Council Fellow		
	Kenneth M.Y. Leung Principal Investigator, Global Estuaries Monitoring (GEM) Programme		
	Weiguo Zhang Senior Researcher, Mega-Delta Programme		
	Liping Zhou (online) Co-Chair, Past Global Changes (PAGES)		
Panelists:	Xiaoyu Fang Co-Executive Director, Future Earth Coasts (FEC)		
	Giovanni Avila-Flores (online) Deputy Director, FEC IPO for Latin America and the Caribbean		
	William Miller (online) Co-Chair, Surface Ocean – Lower Atmosphere Study (SOLAS)		
	Yassir Eddebbar (online) Member, CLIVAR (Climate and Ocean: Variability, Predictability and Change) Pacific Regional Panel		
10:00 - 10:10	Discussion		
10:10 - 10:30	Break (2nd floor)		

# Day 2 - Wednesday, 14 May 2025 Parallel Theme Sessions

2nd floor Multi Function Rooms & Business Center

	Multi Function Room 1	Multi Function Room 2	Multi Function Room 3	Multi Function Room 4	Business Center
10:30 - 12:00	Session 11: International research and educational collaboration for sustainable tropical and subtropical marine ecosystems	Session 5: Island biodiversity and ecosystem multifunctional- ity in the Anthropocene	Session 8: Synthesizing ecosystem-so- cial interactions in coastal seas	Session 13: The uncertainty of coastal ecosystem shift to nutrient/pollutant inputs under climate change	
12:00 - 13:30	Lunch (3rd floor Ballr	room)			
13:30 - 15:00	Session 4: Stakeholder engagement in complex ocean multilevel governance settings	Session 6: Coastal blue carbon ecosystem: Carbon resources evaluation, sources-sinks processes and management collaboration	Session 9: Optical remote sensing in the Northwest Pacific and the Central Indo-Pacific Oceans	Session 13: The uncertainty of coastal ecosystem shift to nutrient/pollutant inputs under climate change	
15:00 - 15:20	Break (2nd floor)	Break (2nd floor)			
15:20 - 17:45	Session 2: Achievements from IMBeR Grand Challenge 2 and opportunities for IMBeR 3.0: from scenarios, predictions and projections to actions, solutions and interventions	Session 6: Coastal blue carbon ecosystem: Carbon resources evaluation, sources-sinks processes and management collaboration	Session 12: SIBER and the Second International Indian Ocean Expedition	Session 13: The uncertainty of coastal ecosystem shift to nutrient/pollutant inputs under climate change	Reflecting on IMECaN's Journey: Achievements, Insights, and Future Directions
	Session 3: Blue Transformations: Governance for the ocean-climate-biodiversity nexus				
18:00		Conference Dinne	er (3rd floor Ballroom2	)	

## **FUTURE OCEANS**<sub>3</sub>

## Schedule

## Day 3 - Thursday, 15 May 2025 **Plenary Events**

3rd floor Ballroom

08:30 - 10:00	IMBeR Doctoral Forum	<b>Convenors:</b> Ning Zhao and Kai Deng	
10:00 - 10:20	Break		
10:20 – 12:20	Open Discussion IMBeR synthesis with a focus on messages about impact, enabling factors and future directions Ocean sustainability in the context of global change: Preliminary insights from IMBeR experience Derek Armitage, University of Waterloo		
12:20 - 12:30	Closing		
12:30 - 13:30	Lunch		

## Day 3 - Thursday, 15 May 2025 **Closed-door Meeting**

2nd floor Multi Function Room 1

13:30 - 15:30

Scientific Steering Committee Meeting 2025

## Friday, 16 May 2025

Depart from the 1st floor lobby of Courtyard by Marriott® Shanghai Minhang

07:30 - 16:30

**Excursion - Chongming Island** 

## **Session Program**

Session 2&3

fisheries governance?         15:37 - 15:49       Cecilia Engler (online) Oceans and climate change adaptation: Tracking international law and policy developments and challenges         15:49 - 16:01       Sophia Jane Buchanan Barlow (online) A sea of relationships:Relational wellbeing in the blue economy         16:01 - 16:13       Ricardo M. #### Session 8

#### SESSION 8: SYNTHESIZING ECOSYSTEM-SOCIAL INTERACTIONS IN COASTAL SEAS

Wed. 14 May	(UTC+8) 10:30 - 12:00	2nd floor Multi Function Room 3
Convenor	Su Mei Liu	
Moderator	Gisèle Flodore Ghepde	eu Youbouniepse Kadjop
Rapporteur	Rong Bi	
10:30 - 10:35	Welcome and Introduction	on

Oral presentations		
10:35 - 10:50	Rong Bi         [8-10]           Long-term change patterns of phytoplankton and bacterial community and their interactions in Sanggou Bay         [8-10]	
10:50 - 11:05	Siraporn Tong-U-Dom         [8-11]           Response of the lower trophic ecosystem in the eastern Seto Inland Sea to changes in nutrient supply from rivers	
11:05 - 11:15	Madhuleena Das (online)       [8-1]         Mental health and wellbeing in the face of climate uncertainty: A study of Mousuni Island communities	
11:15 - 11:25	Huikun Yao       [8-4]         Joint effect of aquaculture and land reclamation on sediment dynamics       [8-4]	
11:25 - 11:35	Suzhen Yang Study on health evaluation of human-ocean coupling system under climate change and human activities	
11:35 - 11:45	Yanhong Xu       [8-12]         Phytoplankton community succession in the East China Sea over the past 300 years driven by climate change: Evidence from sterols	
11:45 - 11:55	Monalisa R. O. da Silva (online)       [1-15]         Do Marine Protected Areas fulfill the expected effects on coastal social-ecological vulnerability?       [1-15]         A perspective from Europe and Latin America       [1-15]	
11:55 - 12:00	Yanqun Yang         [8-14]           Cost-effectiveness optimization method for eutrophication mitigation measures in the Bohai Sea         [8-14]	
Poster Session	on 13 May and Virtual Poster Exhibit on Whova App	
	Xin Zhao         [8-5]           Optimizing rights-based management for global fisheries sustainability: A comparative analysis of use rights	
	Longyun Lai         [8-8]           Dissolved nitrogen in a tropical river-sea continuum: A seasonal view on the distribution and transformation	
	Zihao Feng       [8-9]         Impact of sediment release strategies on estuarine dynamics: Analyzing the effect of mud mantling and its implications for sediment management	
	Chen Zhong         [8-13]           Destabilization of iron-bound organic carbon in coastal sediments under dynamic sedimentary conditions	
	Narriman Saleh Jiddawi(online)       [8-3]         Women empowerment at the grassroot level along the coast of Zanzibar, Tanzania       [8-3]	

# **Session Program**

### Session 9

Session 9: Optical remote sensing in the Northwest Pacific and the Central Indo-Pacific Oceans

Wed. 14 May	(UTC+8) 13:30-15:00	2nd floor Multi Function Room
Convenor	Young-Je Park	
Moderator	Gisèle Flodore Ghepo	deu Youbouniepse Kadjop
13:30 - 13:35	Welcome and Intro	duction

## **Oral presentations**

13:35 - 13:50	Aida Sartimbul (online) Variations in sea surface temperature of the Madura St (online)
13:50 - 14:05	<b>Fang Shen</b> The latest satellite data products: 10-year red tide data data product in global scale
14:05 - 14:20	Hee-Jeong Han Optimization algorithm of inherent optical properties an
14:20 - 14:35	Young - Je Park Toward operational monitoring of floating Sargassum n
14:35 - 15:00	Discussion and Conclusions

Shanghai, China & Online

m 3

[9-2] Strait: Impacts of meteorological factors in the era of climate change	
[9-4] ataset in East China Sea and 26-year phytoplankton functional type	
[9-5] and atmospheric correction from GOCI-II	
[9-6] n macroalgae	

#### Session 11

SESSION 11: INTERNATIONAL RESEARCH AND EDUCATIONAL COLLABORATION FOR SUSTAINABLE TROPICAL AND SUBTROPICAL MARINE ECOSYSTEMS

Wed. 14 May	(UTC+8) 10:30 - 12:00	2nd floor Multi Function Room 1
Convenor	Hiroaki Saito	
Moderator	Baker Matovu	
Rapporteur	Suhendar I Sachoemar	
10:30 - 10:35	Welcome and Introduction	on

Oral presentatio	Oral presentations	
10:35 - 10:47	Ken-ichi Hayashiaki         [11-7]           From JSPS CREPSUM to e-ASIA JRP: What we learned from long time collaboration	
10:47 - 10:59	Abdul Ghaffar       [11-2]         Global ecological adaptation for coastal regions       [11-2]	
10:59 - 11:11	Suhendar I Sachoemar         [11-9]           Implementation and strategic planning for connecting science and communities for sustainable seas: Case studies in dissemination of Ciguatera Fish Poisoning (CFP) in Gili Matra Lombok, Indonesia	
11:11 - 11:23	Tahrim Jannat Mowsumi         [11-8]           Advancing ocean modeling in the Bay of Bengal: Validating FIO-COM and assessing wave-induced mixing effects	
11:23 - 11:35	Nadiah Wan Rasdi (online)       [11-4]         Enhancing sustainable shrimp aquaculture: Effects of herb-enriched copepods on whiteleg shrimp (Litopenaeus vannam- ei) post-larvae in tropical marine ecosystems	
11:35 - 11:47	Muta Harah Zakaria (online)       [11-3]         Seagrass diversity in Malaysia and ecosystem services       [11-3]	
Speed talks	Speed talks	
11:47 - 11:50	Ferdaus Mohamat Yusuff (online)         [11-5]           Behavioral response of Cerithidea sp. to cold-water discharge in tropical marine benthic environments         [11-5]	
11:50 - 12:00	Discussion and Conclusions

#### Session 13

SESSION 13: THE UNCERTAINTY OF COASTAL ECOSYSTEM SHIFT TO NUTRIENT/POLLUTANT INPUTS UNDER CLIMATE CHANGE

Wed. 14 May	(UTC+8) 10:30-16:10	2nd floor Multi Function Room 4
Convenors	Bochao Xu and Masal	niko Fujii
Moderator	Justina Adaugo Obie	nu
Rapporteur	Shibin Zhao	
10:30 - 10:35	Welcome and Introduc	tion given by Dongyan Liu

Oral presentations		
Chemistry and environment – chaired by Dongyan Liu and A'an Johan Wahyudi		
10:35 - 10:50	Masahiko Fujii [Invited]         [13-1]           Biogeochemical modeling to investigate the impacts of ocean acidification and hypoxia in Tokyo Bay, Japan         [13-1]	
10:50 - 11:05	Bochao Xu [Invited]         [13-2]           Submarine groundwater discharge is an important pathway for nutrient entering the China's coastal seas	
11:05 - 11:20	Dong Xu [1-21] Nutrient limitation intensifies negative effects of ocean acidification on silica production of the globally important diatoms	
11:20 - 11:35	Shibin Zhao         [13-3]           Isotopes reveal submarine groundwater discharge as an overlooked nutrient source in coastal seas	
11:35 - 11:50	<b>Pavel Semkin</b> [1-24] Isotopic signatures $\delta D$ , $\delta^{18}O - H_2O$ , $\delta^{18}N$ , $\delta^{18}O - NO_3$ and nutrient in volcanic catchments of Kamchatka Peninsula and impact of the continental runoff on the adjacent Pacific Ocean	
11:50 - 12:05	Vina Listiawati (online)       [1-36]         Marine litter pollution on Trisik Beach, Yogyakarta, Indonesia       [1-36]	
12:05 - 13:30	Lunch	
Biology and ecology – chaired by Bochao Xu and Masahiko Fujii		
13:30 - 13:45	Zeng Zhou [Invited]       [1-39]         Biomorphodynamics-based strategies for coastal erosion defense and ecosystem resilience enhancement	
13:45 - 14:00	Joshua Militar Regalado (online)         [1-22]           Challenges and opportunities in the management of coral reefs Miagao, Iloilo, Philippines	
14:00 - 14:15	A'an Johan Wahyudi [Invited]       [13-4]         Introducing Indonesia Marine Biogeochemistry Forum (IMBF): Mainstreaming marine biogeochemistry research and synergizing IMBeR's global objectives	
14:15 - 14:30	Yujue Wang [Invited]       [13-5]         Coastal eutrophication in China: trend, sources, and ecological effects	
14:30-14:45	Beatriz Dias (online)       [1-26]         Through long-lasting and pulse disturbances: How Prince William Sound, Alaska, ecosystem functionality behaved throughout three decades	
14:45-15:00	Justina Adaugo Obienu[1-29]Seasonal variation in bycatch of silky sharks (Carcharhinus falciformis) and cetaceans in artisanal drift gillnet fisheries of the Niger Delta, Nigeria	

15:00 - 15:20	Break	
Speed talks - cl	Speed talks – chaired by Hongbin Liu and Zeng Zhou	
	Mark June S. Consigna         [1-12]           Microplastics accumulation in shallow hydrothermal vents ecosystem: Evidence from hydrothermal vent crab Xenograp- sus testudinatus	
	Song Ge         [1-19]           Mapping the global carbon emissions of marine sectors         [1	
	Shengnan Zhang         [1-25]           Effects of herbaceous marsh mowing on aerial invertebrate communities: A case study in Yangtze Estuary, China	
	Mohammed Ali Humran         [1-31]           Yemen and Integrate innovation maritime policy and strategy management to enhance blue economy in the Red Sea           and Indian Ocean	
	Zain Ul Arifeen Muhammd       [4-8]         Hourly-resolved marine viral replication in the subtropical Daya Bay, northern South China Sea	
	Yunying Duan         [13-6]           Centurial shift of diatom fossils and biogenic silicate effect in northern Yellow Sea	
15:20 - 15:59	Aicha Berrada (online)         [1-2]           CUIsst and NAO indexes along the Moroccan Atlantic coast (20-36°N and 6-30°W)         [1-2]	
	Anxo Paz (online)       [1-5]         Understanding multi-stressors in marine ecosystems through a multispecies size-spectrum model in the Northeast         Atlantic	
	Aida Sartimbul (online)       [1-8]         Long-term trend of pelagic fisheries in Bali Strait and its connectivity to the Triple deep La Niña	
	Marta Coll (online)         [1-11]           Advancing marine ecosystem modeling for a changing ocean: Enhancing EcoOcean (v3) for integrated social-ecological assessments	
	Juan José Ortiz García (online)       [1-14]         Effects of ocean warming on the allometry of pelagic food webs. The FORAGE project       [1-14]	
	Elena Lloret-Lloret (online)         [1-16]           Comparing methodological choices for environmental cumulative impacts analysis: The Black Sea as a case study	
	Olayinka Thompson Alasoadura (online)       [1-27]         Assessment of heavy metal contamination in Niger Delta region       [1-27]	
15:59 - 16:10	Discussion and Conclusions	

### IMECaN Event

# **Session Program**

## **IMBeR** Doctoral Forum

	IMBeR Doctor		
Convenors Rapporteur	(UTC+8) 08:30-10:00 3rd floor Ballroom Ning Zhao and Kai Deng Xiaoyue Wei Welcome and Introduction		
Oral presentation	ns		
08:33 - 08:45	Gisèle Flodore Ghepdeu Youbouni Population dynamics and potential impact of global w Kribi-Cameroon, Chimaerus palmarus (Haeckel, 1880		
08:45 - 08:57	Sheng Zeng Tracing terrigenous material transport in the Yangtze		
08:57 - 09:09	<b>Risper Atieno Oteke</b> Peri urban mangrove forests and adjacent communiti Tudor Creek, Mombasa, Kenya		
09:09 - 09:21	Tingli Yan How much coral reef dissolution will be caused by oc		
09:21 - 09:33	Miaomiao Zhang Seasonal pattern of benthic foraminiferal phosphate s		
09:33 - 09:45	Baker Matovu Empowering women in the Blue Economy for ocean analysis and coastal women in Kerala, India		
Speed talks			
	Xintong Jiang Seasonal and decadal variations in nutrients and diss changing water-sediment regimes		
09:45 - 10:00	Yang Hu Saltmarsh plants respond to various hydrodynamic strategies in both aboveground and belowground par		
	Liuting Yuan Is submarine groundwater discharge a major pathwa

	Xueyang Chen Response of oceanic front to the variability of climate		
Poster Session of	Poster Session on 13 May and Virtual poster exhibit on Whova app		
	Dade Song Advancing Sustainable Fisheries Management: A M Coupling with Environmental Drivers—A Case Study		
	Qi Wang Structure of phytoplankton communities in winter Ind		
	Peiwu Han Dynamic responses of key economic species in the different life history strategies		
	Huachen Gao and Yi Gong Little evidence suggests microplastics negatively imp		
	Zhenfang Zhao A preliminary study on the intestinal carbon seques Pacific		

#### IMECaN Event in Future Oceans<sub>3</sub>

Wed. 14 May	(UTC+8) 15:00-16:30	2nd floor Business Center
Convenor	Shenghui Li	
Moderator	Gabriella Akpah Yebo	ah
15:00 - 15:05	Welcome and Introducti	ion

Speaker Presentations		
15:05 - 15:15	Speaker 1 - Juliano Palacios Abrantes, Co-chair	
15:15 - 15:25	Speaker 2 - Shan Jiang, East China Normal University, Past member	
15:25 - 15:35	Speaker 3 - Samiya Selim, Past Chair	
15:35 - 15:45	Speaker 4 - Laura Kaikkonen, Senior Researcher & Past co-chair	
15:35 - 15:50	Q & A for presentation session	
Roundtable Disc	cussion	
	Roundtable Discussion	
	Moderator will prepare open questions to the speakers as well as the participants	
	Special Guest: Laura Kaikkonen, Senior Researcher & Past co-chair	
15:50 - 16:20	-Key lessons learned from IMECaN's first eight years	
10.00 - 10.20	-Assess the effectiveness of current platforms for networking and information exchange	
	-Current challenges in marine research collaborations through the network	
	-Brainstorm innovative ways to strengthen knowledge sharing among members	
	-Strategies for enhancing IMECaN's impact and reach	
	-Envisioning IMECaN's role in IMBeR's new phase	
Wrap-up and Next Steps		
	Wrap-up and Next Steps	
16:20 - 16:30	-Summary of key points from presentations and discussion	
10.20 - 10.30	-Outline of plans for the follow-up in-person meeting and peer-reviewed article	
	Closing remarks	

Shanghai, China & Online

#### RAL FORUM

[1-7] varming on the sole cubozoan of the coastal region of 0)
[DF-1] River system: Insights from radionuclide dynamics
[8-2] ies perception of the impact of degradation on livelihoods in
[DF-3] eean acidification?
[DF-6] storage in coastal tidal flat
[3-6] a sustainability in the global south: Key insights from a bibliometric
[DF-4] solved organic carbon in the lower Huanghe River under drastically
[DF-2] and sedimentary disturbances by modifying their morphological tts
[DF-5] y of carbon and nutrients into the coastal ocean?
[DF-7] ition zone chlorophyll front under greenhouse warming
[DF-8] a factors and warming in the eastern China Seas
[DF-9] lodeling Framework for High-Resolution Catch Estimation and Its y of Northern Mauxia Shrimp ( <i>Acetes chinensis</i> )
[DF-10] donesian Throughflow affected areas in the Eastern Indian Ocean
[DF-11] e Northwestern Pacific to fisheries-induced evolution: A study of
[DF-12] pact embryo growth of a viviparous shark Prionace glauca
[DF-13] stration capacity of three economic fish species in the Northwest

## **Acknowledgement of Volunteers**

**IMBeR** wishes to thank its generous sponsors for supporting the IMBeR Synthesis and Future Planning Conference (Future Oceans<sub>3</sub>).

MEGA-DELTA Deltas associated with large rivers: Seeking solutions to the problem of sustainability

futurørth COasts

Coasts

Anthropocene

**Exhibitors** 

We would like to extend our heartfelt gratitude to all the volunteers whose dedication, enthusiasm, and hard work have contributed immensely to the success of the conference.

#### Our sincere thanks go to the following volunteers:

Yunying Duan
Xin Zhang
Xueyang Chen
Zhiyan Yin
Yue Zhao
 Jiaqi Zou
 Jing Chen
Weicheng Xue
Xiangyang Bai
Han Wang
Jiayi Lu
Yaqi Xiong
Yuting Sun
Weiwenhui Liang
Shangshan Xu
Dade Song
Shiqing Sun
Qi Wang
